DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a method of treating sepsis, classified in class 514, subclass2.
- II. Claims 4 and 5, drawn to a method of detecting endotoxin, classified in class 435, subclass 7.1.
- III. Claim 6, drawn to a method of removing an endotoxin, classified in class 530, subclass 412.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated as Group I is a method of treating sepsis comprising administering a molecule to a patient while Group II is a method for detecting endotoxin which comprises different steps such as labeling the molecule, permitting the molecule to bind to an endotoxin and detecting a labeled bound molecule, all <u>in vitro</u>.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated as Group II is a method for detecting endotoxin which comprises labeling the molecule, binding the molecule to an endotoxin and detecting a labeled bound

Application/Control Number: 09/905,691

Art Unit: 1653

molecule and Group III is a method for removing an endotoxin from a sample comprising different steps not found in Group II such as binding the molecule to a solid support, permitting the bound molecule to bind to any endotoxin and collecting the remaining sample.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated as Group I is a method of treating sepsis comprising administering a molecule to a patient while Group III is a method for removing an endotoxin from a sample comprising different steps not found in Group I such as binding the molecule to a solid support, permitting the bound molecule to bind to any endotoxin and collecting the remaining sample.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Page 4

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, divergent subject matter and the requirement for separate searches for each, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laurie Mayes whose telephone number is (703) 605-1208. The examiner can normally be reached on flexible schedule.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Low can be reached on (703) 308-2923. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-3014 for regular communications and (703) 305-3014 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1123.
